WELCOME TO NORFOLK SOLAR

who we are

Norfolk Solar is a small independent organisation providing:

- design, supply and installation services throughout Norfolk and north Suffolk
- advisory and consultancy services to residential customers and commercial organisations
- training services in partnership with leading environmental and technical institutions, providing a range of training and education services from public information workshops and day courses to advanced solar training for plumbing and heating professionals.

Our team consists of qualified and time-served plumbing and heating technicians with specific skills relating to domestic gas, electrical, roofing and of course solar thermal energy.

The organisation was founded in 2002 and remains wholly owned by Lee Rose. Lee is a domestic solar thermal specialist, and regularly teaches on solar training courses at LILI, BroadSol and the Centre for Alternative Technology. He has also worked closely with Logic Certification to develop their DTI recognised solar domestic hot water training course for plumbing and heating engineers, and has been involved in a number of publications, papers and articles on the subject.

our aims

- to help appropriately reduce people's carbon footprint
- to promote solar water heating technology to a wider audience
- to provide clear and accurate information of how solar water heating works in the UK
- to offer a competitive choice to people choosing solar hot water technology
- to operate in an environmentally aware manner
- to work with our customers in a professional and courteous manner

Norfolk Solar is unlike other renewable energy organisations. Whilst it is important for every organisation to generate profits in order to remain economically sustainable, we have a particular interest in sustaining issues much larger than Norfolk Solar itself and believe our products and services have the potential to deliver far greater benefits to issues facing the positive development of the renewable energy industry, our regional and global environment, and the local community we live in.

Don't just take our word for it, see our 'why us' pages to find out what people think of our activities.

If you are interested in reducing your impact on the environment and want to use solar water heating, we would love to talk to you.

Norfolk Solar are leading the way in truly environmentally friendly small-scale renewable energy.
